Participants are needed for studies conducted by the Dept. of Neurology at the University of Pennsylvania School of Medicine (Children's Hospital of Philadelphia and the Hospital of the University of Pennsylvania) using a Functional MRI to investigate the areas of the brain that process visual information. College age individuals (persons over age 10) are eligible. Minorities are encouraged to apply. Participants will watch images projected onto a screen, which they will view from inside the scanner. The MRI is completely safe, painless, non-invasive (no needles), and can be repeated without harm (unlike x-rays). The study takes approximately one hour to complete. Each participant will receive \$25 and a PICT file, via email, with 16 or more images of his/her brain. For those interested in research, this is a chance to participate in a study. Participants must be able to travel to the Philadelphia area at their own expense. For information, contact Ed Modestino. email: ejmodest@sas.upenn.edu
